- Experience with working with executives
- Creating simple scripts for everyday use

Education

Purdue University Fort Wayne, IN

August 2018-May 2021

Bachelor of Science in Computer Science

GPA 3.63/4.0

Projects

Senior capstone project *Team-lead*

Developed a .NET Framework web-app that used cloud-based services provided by Azure. This served as a purchase order tracker for both clients and employees at Team Quality Services. I developed the database, RESTful APIs, managed security, and helped create unit tests, as well as integration tests with Selenium. My team used Azure DevOps for storing our git repository and our product backlog.

Heroku Web Application *Personal project*

This is a personal project that is continuously being developed using NodeJS as my server. This was built to gain familiarity with newer and upcoming technologies, like NodeJS and React. It also serves as a portal for my projects that I developed over my time in college. This web application is hosted through a personal domain, which can be found [here](#).
