Computer Science Major

Languages/Frameworks

- JavaScript
- Java
- SQL
- HTML/CSS
- C# (.NET Framework)
- NodeJS
- C
- PHP
- Ruby

Objective

To advance my career in the realm of software engineering by assisting the company with their goals and meeting their quotas. Through this, I will strive to grow in knowledge to better the company and myself.

Experience

August 17th, 2020-Now

End User Operations • Part-time • Lincoln Financial Group

June 30th, 2018-June 17th, 2020

IT Service Rep • Contractor/Intern • Lincoln Financial Group

With both IT positions, I utilized my technological skills to replace or repair hardware, remove viruses, prepare computers for customer use, ship computers, troubleshoot computers, and use Service Now and Active Directory. I also worked with several Vice Presidents at Lincoln Financial.

Education

Studying at Purdue University Fort Wayne, 2018-2021

3.63 GPA while working part time

Projects

Senior capstone project *Team-lead*

Developed a .NET Framework web-app that used cloud-based services provided by Azure. This served as a purchase order tracker for both clients and employees at Team Quality Services. I developed the database, RESTful APIs, managed security, and helped create unit tests, as well as integration tests with Selenium. My team used Azure DevOps for storing our git repository and our product backlog.

Heroku Web Application *Personal project*

This was a personal project that was developed using NodeJS as my server. This was built to gain familiarity with newer and upcoming technologies, like NodeJS and React. It also serves as a portal for my projects that I developed over my time in college.
